

A mobile office with style

Stay on top of your business

Typically, you're a small operator working in the road haulage sector. You own one or more trucks and drive regularly yourself. You may be contracted to a haulage management company or forwarding agency – or get your work from other sources. However you do business, there'll inevitably be a lot of administration and paperwork. Accounts, expenses, invoices, VAT returns, etc.

Like many owners of small businesses, you spend a lot of time working at a PC – using your favourite word processor and spreadsheet program or running special book-keeping or accountancy software, etc. How do you do this when you're on the road, sometimes for days on end? You're probably either using or thinking of buying a laptop. But you have understandable reservations about how easily it can be stolen, dropped or damaged – by cold, vibration, dust, etc.

The answer? Think seriously about upgrading to a Scania P- or R-series – with a Scania Interactor 600 computer fully integrated into the dashboard and protected against theft. Get yourself a secure and stylish mobile office. Not only can you use the inbuilt computer as a regular PC for your office software. You can also get access to Scania Fleet Management services – GPS-driven navigation aids, for instance. In addition, there's a hands-free phone for keeping in touch with your customers, and even optional TV for rest-time relaxation.

A mobile Windows® PC with theft protection

Scania Interactor 600 is a robust and reliable full-function PC with a large 10.4 inch colour touch screen completely integrated into the dashboard. It comes with Microsoft Windows® XPe, allowing you to install and run your own Windows-based applications. You can also attach a keyboard and printer, thus turning it into a regular office PC. Careful Scania workmanship ensures high quality in all connections and antennas and means that the computer is professionally installed.

Keep the thieves at bay

Because it's built into the dashboard, the Scania Interactor 600 is less attractive to a potential thief than a laptop. But also it's electronically connected to the chassis ID. Once installed in one truck it cannot be moved to another as it needs the correct ID to start.

Surf the web

A modern inbuilt GSM/GPRS modem allows connection to the Internet. Application software running on the Scania Interactor 600 can therefore collect or send information over the web. You can even surf the web if you wish and find new transport assignments on one of the growing number of Internet freight exchanges. Note, however, that web browsing software is not included.

Enjoy the good ergonomic design

Driver comfort is a Scania hallmark. We've therefore designed and positioned the special colour touch screen to enable easy interaction. To allow easy viewing, we've made the screen large and designed it so that the illumination changes in response to the surrounding conditions. It dims at night, for instance, and brightens during the day. We also provide a regular keyboard in case you prefer that to a touch screen.

SCANIA INTERACTOR 600

Cover your rear

Scania Interactor 600 provides optional support for a rear-view camera. You provide the camera – we provide the software that shows the view from the camera on the vehicle's large computer screen. It gives a useful way of checking the rear of the truck and viewing close-ups or blind spots, etc. To make it easy for you, Scania offers a rear view camera as an optional accessory.

Keep in touch

No office is complete without a phone. Scania Interactor 600 therefore comes with a hands-free mobile phone. It supports text messaging, has large digits and an address book that can store hundreds of telephone numbers and addresses. It helps you keep in touch with customers, friends and family throughout your journey.

Relax with home comforts

When you're not driving or working on your PC, you need to relax. Optional TV helps to keep you fresh. There's also a DVD reader. DVD player software is not included.

Retrofitting

If you've already bought a Scania P- or R-series but didn't choose the Scania Interactor 600 option at the time, you can still change your mind. Scania Interactor computers can be retrofitted into Scania P- and R-series trucks with long dashboards.

If you plan to purchase a Scania P- or R-series but aren't sure whether you're ready for the Scania Interactor 600, why not ask for Scania Interactor cable preparation to be put in place. That will make it easier to install a Scania computer at a later date.

Driver support tools

Navigation aids can be worth their weight in gold, saving you much time, fuel and hassle. Scania Interactor 600 is delivered with a basic navigation aid called *Moving Map* – an on-screen map showing the position of your vehicle and nearby Scania workshop locations. In other words, there's no need for an extra navigation box, taking up valuable space.

There is also an optional *Navigation* feature. This is an impressive facility that supports route planning and gives turn-by-turn voice and visual navigation instructions down to street number level. It can save you a lot of trouble when trying to zero in on pick-up or drop-off points.

Other services available with Scania Interactor 600 include:

- *Drive Time*, which gives current, daily and weekly information about time driven, mandatory rests, etc. – useful reminders to help you comply with EU regulations.
- *Trip Report*. This automatically collects and presents detailed information about vehicle, driver and trip performance. It helps you improve your performance by showing how, and under what conditions, your driving varies from day to day.

Office productivity tools

Many haulage management companies require their contractors to use fleet management services. Scania Fleet Management provides a host of such services, which can of course be installed in the Scania Interactor 600s in your trucks.

Scania has experts that specialize in these Scania Fleet Management services. If you want to find out more, talk to your Scania dealer.

THE ROAD TO SUCCESS

At the forefront of vehicle technology

Scania Interactor 600 puts you at the forefront of vehicle technology. It will make your life easier and improve your productivity. Use it to transform your Scania truck into a practical and stylish mobile office. It gives you the essential tools needed by a modern businessman on the move.

If you want to see a technical specification sheet, check out our website. Better still, why not give your local Scania dealer a call and take a closer look? Your Scania truck was built to build your business. By bringing your business into your truck, the Scania Interactor 600 takes you a big stride further along the road to success.

Scania pursues an active policy of product development and improvement. For this reason the company reserves the right to change specifications without prior notice. Vehicle data may vary from one market to another.
