

Scania Fleet Management Portal

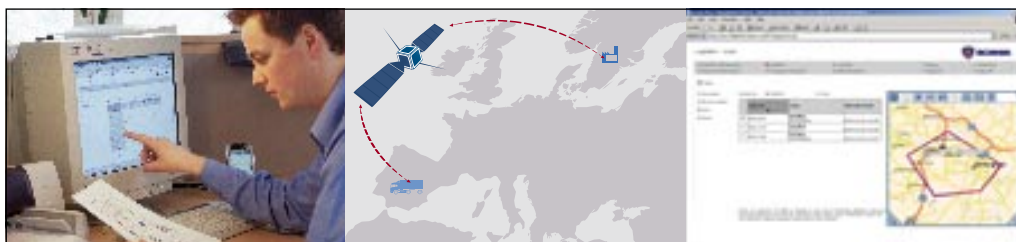

Using the Scania Fleet Management Portal, it is easy to monitor your vehicles over a secure Internet connection. You need no prior experience and administration is simple. When you need access to vehicle or positioning data, or want to communicate with your drivers, all you need to do is sign on to the portal.

The Scania Fleet Management Portal works with the vehicle platform you have installed – Scania Communicator 100 or Scania Interactor 200/500/600. These systems send data from your vehicles either automatically, or on request, over a GSM communication network to the Scania Fleet Management Portal, where it is sorted and stored by vehicle.

Vehicle and fleet data can be obtained from

any PC connected to the Internet where a secure logon system protects your data. No special software or expensive training is required. Information about individual vehicle status and performance – or the entire fleet – is always instantly available on maps and in reports, directly on your PC screen. You know where your vehicles are and which ones are available for new assignments.

Portal Services

Scania FMP Vision

Scania FMP Vision is designed for Scania Communicator 100 but is also available for Scania Interactor 200/500/600. It provides an overview of fleet data, written position information on vehicles and alarm functions. For more detailed data, we recommend Scania FMP Basic.

Scania FMP Basic

Scania FMP Basic gives you an overview of vehicle and driver performance, displaying vehicle reports in lists and graphs. It also provides vehicle status reports with written positioning and alarm functions. Scania FMP Basic is available with Scania Interactor 200/500/600.

Scania FMP Plus

Scania FMP Plus includes all the features of Scania FMP Basic but also includes text message functionality to send drive orders and free text messages. It is only available with Scania Interactor 200/500/600.

Scania FMP Map

Scania FMP Map (including the Zone application) is an optional subscription for Scania Interactor 200/500/600 or Communicator 100. It can be combined with any of the services above.

The map for Western Europe is in scale 1:10,000, corresponding to a detailing at street level. For the eastern part of Europe, the scale is 1:250,000. The Scania workshop network is shown on the map.

Log File Mail Service

For customers who do not need the functionality of Scania FMP, Log File Mail Service forwards TripAnalyser log files from Scania Interactor 200/500/600 to a registered e-mail address. In order to analyse the log files, Fleet Analyser software is required.

System Requirements

- Personal Computer, PC
- Internet Explorer 5.5 with Service Pack 2 (SP2) or higher
- Internet Connection: 56 kbps or faster
- Screen resolution: 1024 x 768

The SIM card required in the vehicle modem is not included in the price of the subscriptions.

Scania Fleet Management Portal handles all data administration on the server side, including security back-up for vehicle data and messages, as well as software updates.

Language Support

Scania FMP provides language support in the following languages: Czech, Danish, Dutch, English, French, German, Italian, Polish, Portuguese, Spanish and Swedish.

All Scania Fleet Management components carry the same guarantee as other Scania accessories.

Visit www.scania.com for more information, or contact your local Scania dealer.
